DETAILED ACTION

Election/Restrictions

Applicant's election of Specie I, sub-specie iii in Paper No. 16 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, (i.e. that no claims are generic) the election has been treated as an election without traverse (MPEP § 818.03(a)).

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

The abstract of the disclosure is objected to because of undue length. Correction is required. See MPEP § 608.01(b).

Drawings

This application has been filed with informal drawings, which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 5 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The use "of at least one additional subxiphoid incision" is not described within the specification in any way.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

And

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 6-7, and 25-27 rejected under 35 U.S.C. 102(b) as being anticipated by Oliva (5,385,156). Oliva discloses a method of performing a cardiac procedure comprising: making a subxiphoid incision, advancing an endoscopic cannula

(pericardioscope) through a trocar in the incision, and providing a hole in the pericardium with a scissors inserted through the endoscope (col.13, lines 57- 65).

Claims 34-37 are rejected under 35 U.S.C. 102(e) as being anticipated by Roth (6,346,074 B1). Roth discloses a method of performing a cardiac procedure comprising: insertion of an endoscope having an expandable sheath overlying it (col. 4, lines 12-20) and inserting a repair device through the sheath (Fig. 8B).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11, 23-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Oliva (5,385,156) as above in view of Vaska et al. (6,237,605 B1). Oliva discloses a method of performing a cardiac procedure using an endoscopic cannula however Oliva fails to disclose using the cannula for a cardiac mapping procedure. Vaska et al. teaches the mapping of the conduction pathways of the heart for the diagnosis of electrophysiological disorders (Figs. 8 and 9). It would have been obvious to one of ordinary skill in the art to combine the teaching of the mapping of the conduction pathways of the heart, as taught by Vaska et al., to a method of performing a cardiac procedure using an endoscopic cannula as per Oliva, in order to for the diagnosis of

electrophysiological disorders. Please Note: The process of cardiac mapping inherently involves a sweeping motion of the device over the anterior and posterior of the heart.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas C. Barrett whose telephone number is (703) 308-8295. The examiner can normally be reached Tuesday-Friday between 9:00 A.M. and 6:00 P.M.
